Artificial Intelligence in the Health Sector

There has been a surge of interest in the use of artificial intelligence (AI) in healthcare in recent years. Artificial intelligence (AI) has the potential to transform the field of medicine. To be specific, AI will most likely improve access to healthcare and how patients are treated, but it will also optimise resource allocation, allowing health systems to function more effectively and efficiently. The potential for AI to reshape the field of healthcare, to aid in diagnosis and enable a more personalised precision approach to medicine is limitless.
